SURFACE MOUNT DELINEATORS

FLUSH MOUNT DELINEATION

The City Post is an ultra-high performance post that features a sleek profile and quick "spin-in" deployment. This all polyurethane channelizer post demonstrates quick, sharp rebound when impacted and is perfect for installations in high-speed, high-impact locations like gores, toll plazas and HOT lanes as well as low-speed urban locations where trip hazards are a consideration.

- Minimal maintenance, no base to become dislodged
- One post for high speed or low speed installations
- "Easy Spin" installation & removal of post equals minimal worker exposure
- Long life of post assembly makes this post highly cost effective
- 360° of reflective visibility

36" standard length. White, Yellow, Orange, and Black.

#12005900

QUIET ZONE DELINEATION

The recent "Train Horn" Rule now requires "Supplemental Safety Measures" at grade crossings to prevent motorists from driving around gates. The Clover-Leaf Channelizer Curb System is a Median Separation system that permits safe and efficient operation of rail and highway traffic over at-grade rail crossings. The system provides an economical median barrier system for restricting motorists from driving around lowered crossing arms.

- System is "linked together" to create a picket fence effect, and visual barrier
- Curb system reduces gate violations and improves safety
- Stands up to vehicle impacts at over 60 mph and rebounds to upright position
- High visibility at night from hundreds of feet away
- Low profile provides less hazard to both emergency vehicles and motorcycles
- Easily installed with our innovative anchor bolt system

38" curb section with 36" post and hardware #12000499

End Cap (Required) #12000498
