TRANSITION

FREEZING

5" Indicator with theft resistant hardware
#14900260

8" Indicator with theft resistant hardware
#14900270
(recommended for roadway)

ADVANCED NOTICE SIGN

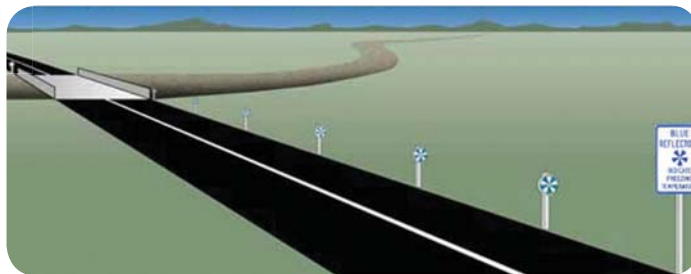

- 12"x18" #14900240
- 18"x24" #14900250
- 24"x36" #14900255

7"x10" sign with attached indicator
#14900210

10"x14" sign with attached indicator
#14900215

Each year thousands of people, unaware of dangerous conditions, slip and fall on ice. Temperature-sensitive reflectors placed outside of exit doors and placed appropriately around outdoor parking areas and walkways, will signal when, and only when, freezing or near-freezing conditions exist. This simple outdoor system can prevent many of these slip & fall personal injuries by alerting people that ice may be on the ground and that caution should be used.

- Hospitals and nursing homes, retirement and assisted living centers
- Manufacturing plants, power plants
- Office and municipal buildings
- Retail locations
- Airports and train stations
- Parking lots, loading docks, and sidewalks
- Stairs and wheelchair ramps
- Elevated walkways, and pedestrian bridges

Temperature-sensitive reflectors mount on standard guideposts and act as normal delineators until temperatures near freezing. At that time the reflectors turn blue, alert drivers of freezing conditions, and eliminate the unpleasant surprise of difficult-to-see ice. These roadway reflectors are most effective when installed in a series of 3-5 reflectors, positioned well in advance of the problem area, to give motorists time to react to the ice-warning.
