SOLAR LED CROSSING SIGN SYSTEMS

SMART ACTIVATORS

BlinkerSigns®, along with Binker-Beam & BlinkSync, are activated by several options including the following:

Push buttons

Bollards

Motion (Pedestrian and Bicycle)

Vehicle Speed

Audio Alarm

Key fob transmitter/receiver

Timeclock controller

Toggle

24/7

Blink-Link Remote monitoring and programing

Key switch, Climate activation (fog, snow, ice, etc.), In-ground inductive loop.

BIKE PATH LED WARNING SYSTEM

Improved safety for bike path users and motorists!

Recreational paths used by bikers and joggers inevitably end up crossing paths with traffic. The LED Bike Path System detect vehicles approaching these intersections, then trigger flashing LED BlinkerSigns at the intersection. Drivers and cyclists are alerted simultaneously. The LEDs flash only when activated, and only when the intersection may have potential conflict.

Applications

- New bike/jogging locations
- High incident intersections
- Rural roads
- Advanced bike/jogging path warnings

The Bike Path LED Warning System can be triggered actively or passively by your choice of activation device, including wired or wireless push-buttons, infrared bollards, and vehicle motion detectors.

Vehicle motion detectors trigger the system, warning path users and drivers simultaneously.

SOLAR PEDESTRIAN CROSSING SIGN

In some scenarios, mid-block crossings have shown to be very dangerous when not properly drawn out and made visible to drivers. Standard signage might not be entirely effective in new and high-use crossings, cluttered or visually challenging crossings, or crossings within higher speed, higher traffic volume areas.

Benefits:

- Saves lives
- Reduces injuries and accidents
- Zero electrical costs

Advantages:

- Federally approved (FHWA)
- Use at any un-signalized crosswalk

SOLAR ADVANCED SCHOOL CROSSING

Safe routes to school are imperative to our children. Solar LED School Crossing Signs are designed to make bicycling and walking to school safer, reducing injuries and fatalities by boldly alerting drivers to the presence of school children, crossing guards and other pedestrians in school zones. Solar powered School Crossing BlinkerSigns are easily installed and offer an earth-friendly solution for making school zones safer.

APPLICATIONS

- New school locations
- High incident intersections
- Rural roads
- Advance crosswalk warnings
